Celebrating the Cosmos

The cultural consequences and expressions of astronomy, astrology and cosmology. Collect data on what people believe about the stars right now. Explore the history of astrology. Examine the use of the sky, stars and planets in religion. Investigate ideas about the relationship between soul, psyche and psychology and the cosmos. Research ancient practices of magic and divination. Keep a journal of your own sky observations. Look at how the sky and stars are represented in the arts, literature and film. Learn how to measure and interpret celestial alignments.

THE PROGRAM

The M.Sc/MA in Astrology & Cultural Astronomy is a unique in that it is the only university degree in the world to feature the history, culture & theory of Astrology. We have students from all over the world, from Australia to Russia, and Greece to Hawaii.

About 90% of our students have a background of practitioners of Astrology, while 10% have a general interest in the wider culture of astronomy and ways in which we will use the sky to make meaning in our lives. For this reason it is possible for students who wish to do so to explore the history and use of technical astrology, or to consider the practice of Astrology, including their own practice.
